

## Description

Iwasawa theory for motives attached to automorphic representations is undergoing a great deal of development, thanks to recent progress on many varied topics such as Euler systems, eigenvarieties, Eisenstein cocycles, rigid meromorphic cocycles, and plectic Heegner points.

The aim of this workshop is to bring together young researchers in Iwasawa theory and report on their recent work.

## Acknowledgments

We would like to express our heartfelt thanks to **Melanie Kreimeyer** and **Bianca Walter** for their indispensable organizational support. Their contributions have made this workshop possible.

We are grateful to the **University of Bielefeld** for hosting our workshop.

We wish to extend our sincere appreciation for the generous support of **SFB-TRR358: Integral Structures in Geometry and Representation Theory**.
